

Cash Deposit System

CDP 4

YOUR WORLD COUNTS

SCAN COIN CDP 4 opens up new possibilities for transport companies by combining effective cash management solutions with advanced networking capability.

- ▶ Speed up the cash handling process
- ▶ Proven technology
- ▶ Full connectivity
- ▶ Increase efficiency and profitability

Self Service for Public Transport

CDP 4 offers fast and accurate processing of bank notes, coins, non-cash items and transport tokens, moving them into secure coin vaults and note vaults. Together with the monitoring system, allows you to monitor connected units from one central location. A system which enables easy planning and management of machines at different locations.

Business system integration

CDP 4 offers much more than fast, accurate processing of banknotes, coins and transport tokens. With CDP 4, drivers deposit valuable information for your transport company along with the cash. The unit can be easily integrated into a company's computer network to become a source of important data for your business system. A built-in Windows™-based PC provides the connectivity needed for rapid reconciliation of expected cash against ticket receipts, storing deposit information and making it available via your network for correlation and analysis.

Easy access and installation

CDP 4 gives you access alternatives to suit your premises. You can select front or rear access for emptying. Front or rear access can also be specified for servicing of the system. Installing the CDP 4, either as a "lobby" or "through-the-wall" (vestibule) unit is a fast, easy process causing minimal on-site disruption.

Secure solutions for cash and non-cash items

Deposited cash is stored in secure, self-locking coin and note vaults. One of the major benefits of the easy upgrade to CDP 4 from previous versions is that existing base cabinets, safes and vaults are compatible. Drivers can deposit non-cash items such as credit card slips, cheques and tickets issued in error, in a separate envelope drop safe, at the same time as they deposit cash.

A better driver-interface

The driver-friendly interface can play an important role in communicating with staff and gathering information. Drivers can be asked to give their driver number and vehicle number. The system can also be used to request information on vehicle status to build up a defect log. A range of other applications can be added according to your company's needs.

Specification

Width	800 mm/31.5" Footprint
Depth	730 mm/28.7" Footprint
